Mobilaris Site™

Enabling smarter, safer and more productive workplaces

Explore the pioneering real-time positioning platform
for industrial site management and coordination.

Welcome to the future of industrial safety and productivity

Mobilaris Industrial Solutions empowers industries with digital tools that deliver real-time situational awareness and seamless coordination of people, materials, and activities – boosting productivity, while ensuring safety.

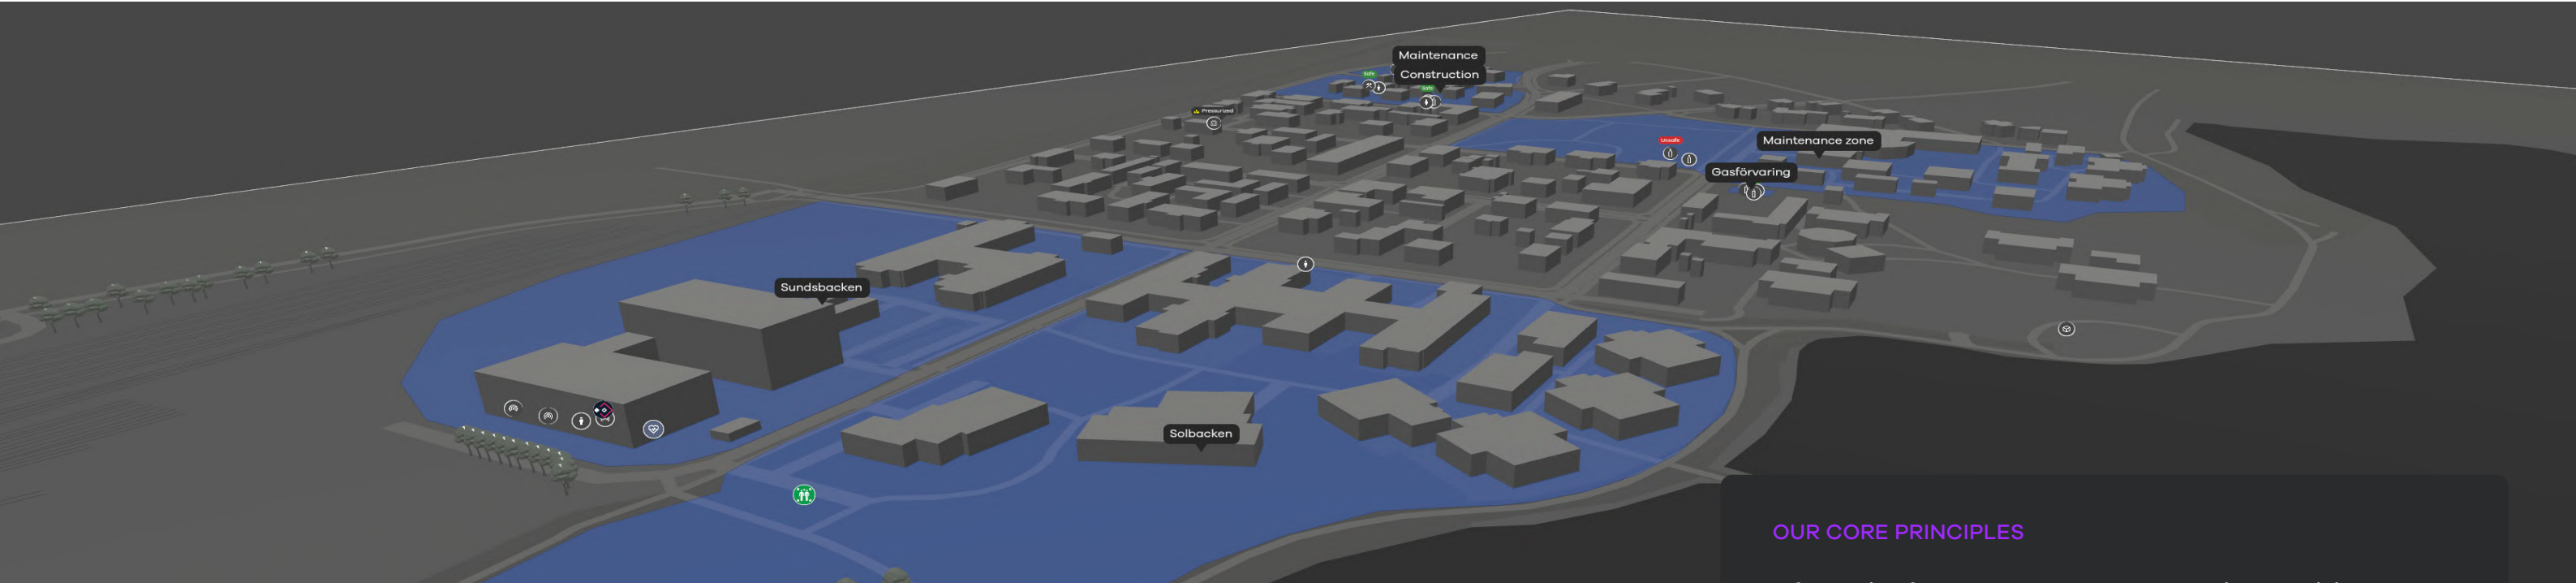

Our platform **Mobilaris Site™**, delivers powerful location-based intelligence across the entire site. It provides reliable information to support critical operations, helping organizations create smarter, safer, and more efficient workplaces.

Mobilaris Site™

A scalable, agnostic platform transforming real-time location data into operational excellence

Mobilaris Site™ is a positioning platform built for industrial environments, with seamless functionality indoors, outdoors, and underground. Whether you operate in a mine or a vast industrial plant, Mobilaris Site™ gives you real-time awareness of ongoing activities and instantly alerts you to anything that requires immediate attention.

The platform is truly agnostic and modular, ready to integrate with any system you use—today or tomorrow. Whether it's a small-scale project or a full-site deployment, Mobilaris Site™ delivers value from day one and scales effortlessly as your needs grow.

“From mines to factories — our goal is clear: safer workplaces, smarter decisions, and more efficient operations.”

OUR CORE PRINCIPLES

Information for everyone

Timely real-time information available to those who need it the most.

Effortless to use

Intuitive and easy to use, with 3D visualization that makes info easy to grasp.

Data-Driven Decisions

Reliable data and insights enable better decisions based on facts instead of guesses.

Open & Future Proof

Built to fit any operations, on top of any systems already in place now or in the future

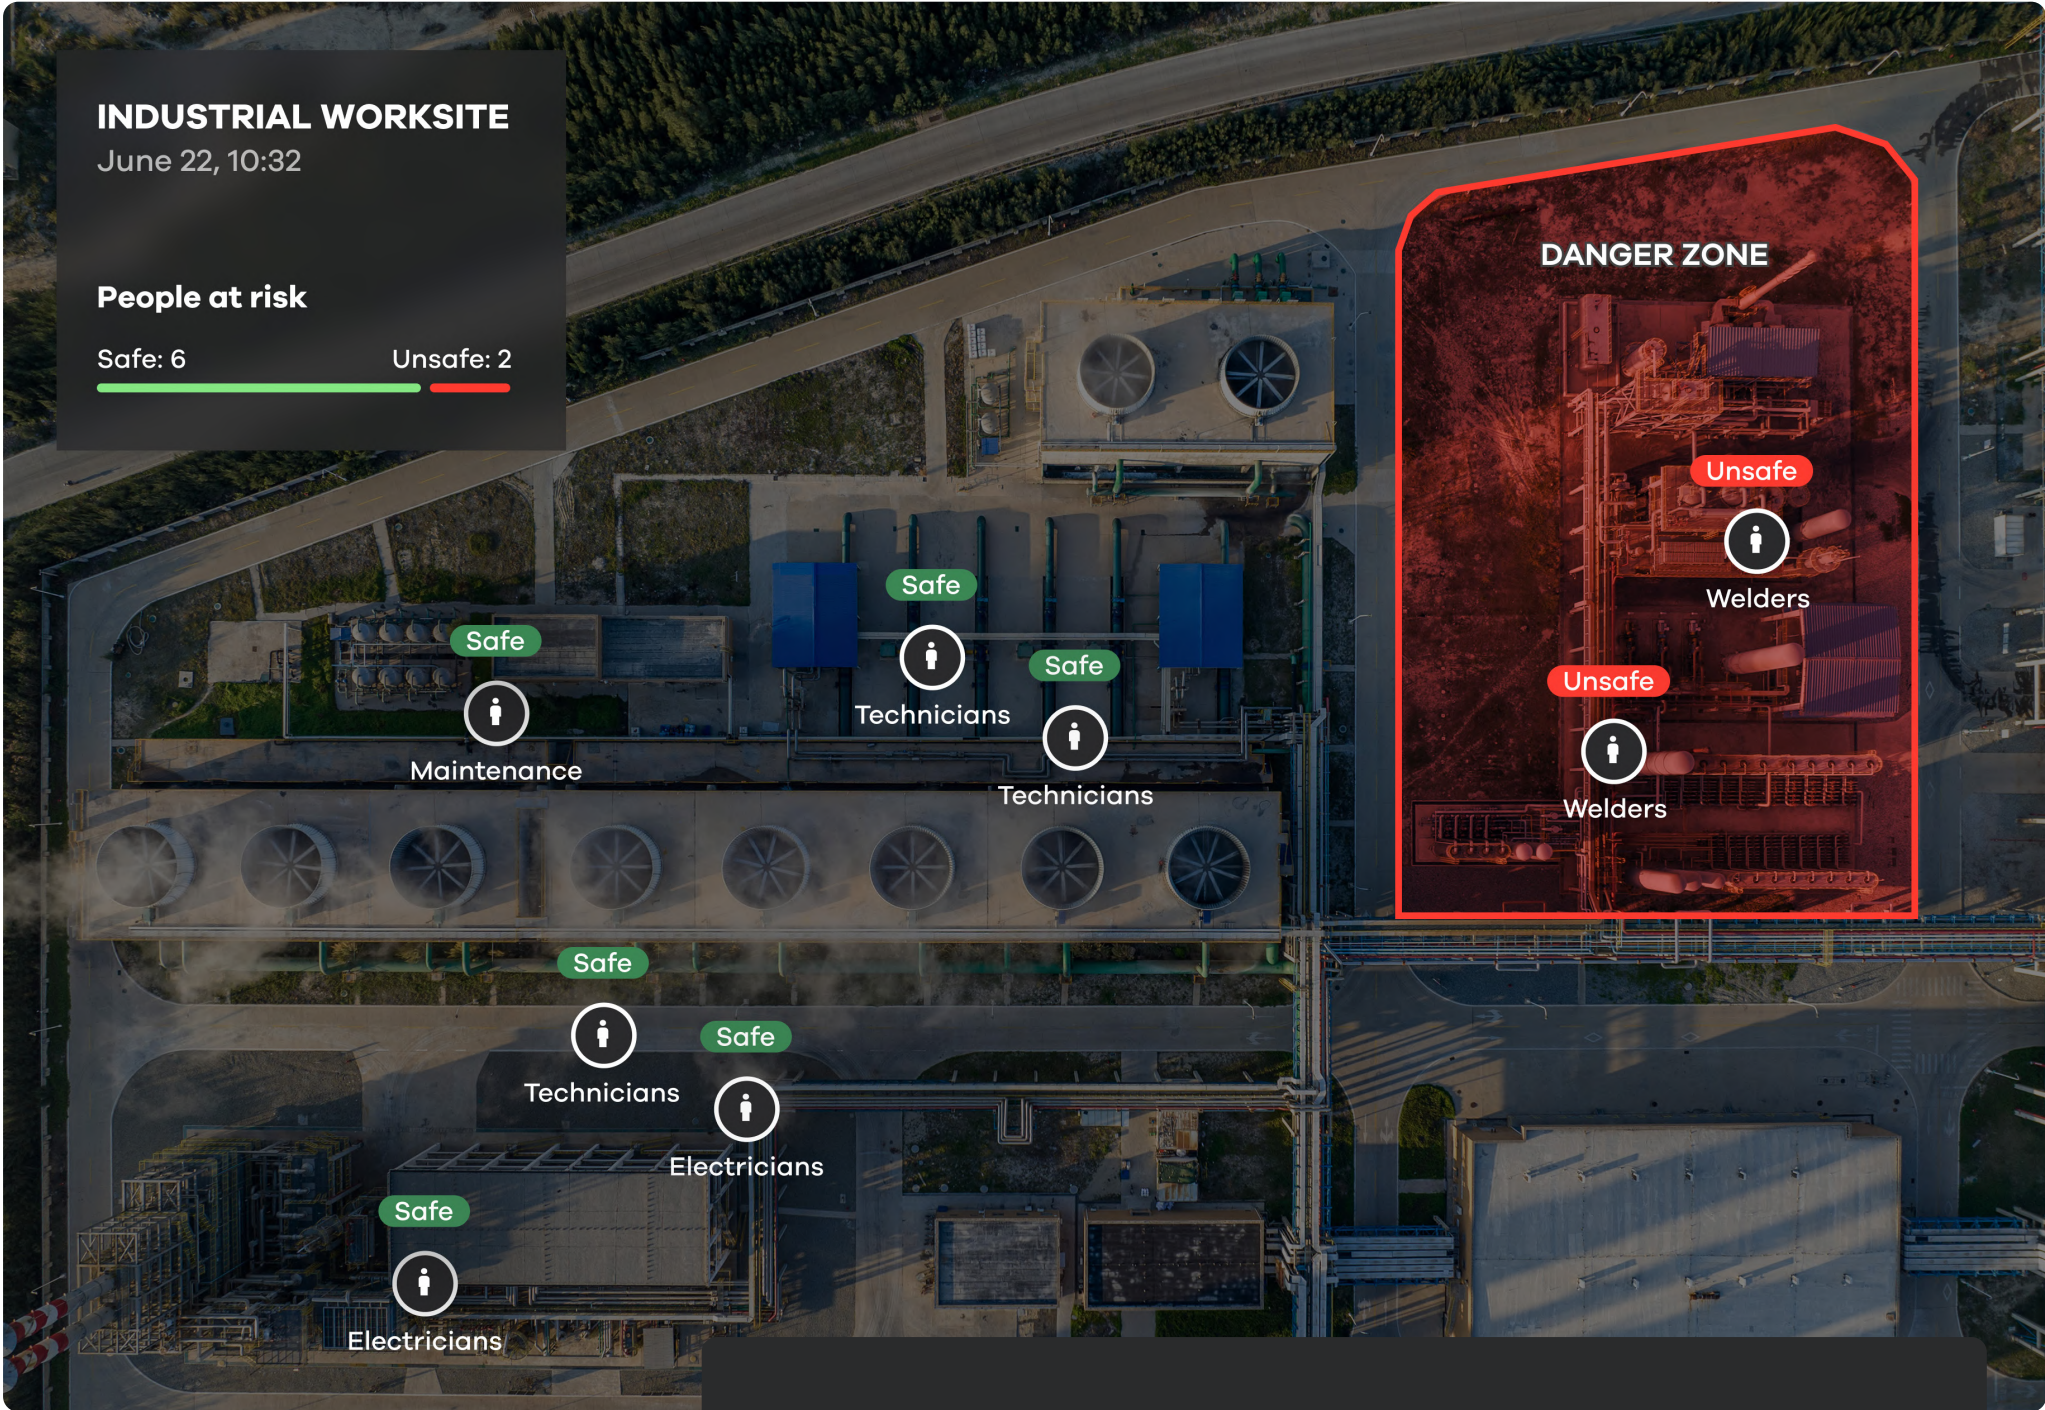

People & Workgroup Location

Increase safety and security by ensuring access authorization and safe location

Ensure safety and efficient coordination of people on site with real-time visibility - whether across the entire site or specific areas. The **People & Workgroup Location** module provides an overview of movements and access authorizations, empowering you to respond swiftly to unexpected activities, security breaches or safety risks.

Benefits:

- Clear visual overview of personnel and workgroup locations
- Streamlined coordination and optimization of work tasks
- Faster, more effective emergency response
- Reduce downtime by eliminating manual work and information gaps
- Seamless integration with access control systems such as ID06 and SSG.

Protecting integrity and privacy

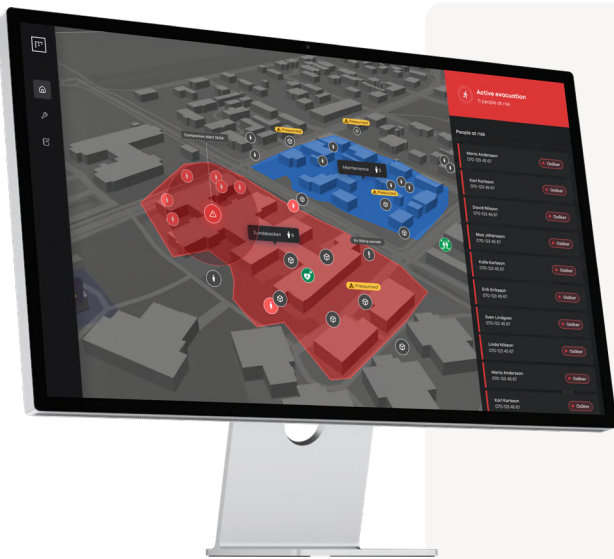

Mobilaris Site™ is designed with privacy at its core. It fully adapts to customer GDPR policies and ensures that all positioning data is protected and remains anonymous. Only in emergency situations can authorized personnel access personal information to help protect individuals at risk.

-  Anonymization
-  Security
-  Compliance

Evacuation Support

– When every second counts

In critical emergency situations, every second counts. With Mobilaris Evacuation Support, we provide evacuation leaders and rescue personnel with real-time awareness of personnel location during emergencies—enabling faster, safer evacuations.

Benefits:

- Live evacuation monitoring: instantly see who has reached safe assembly areas
- Pinpoint personnel in danger: View exact locations and contact details, exportable lists supporting coordinated rescue efforts
- Proactive safety alerts: Individuals near potential danger zones can trigger early warnings, enabling quicker response.

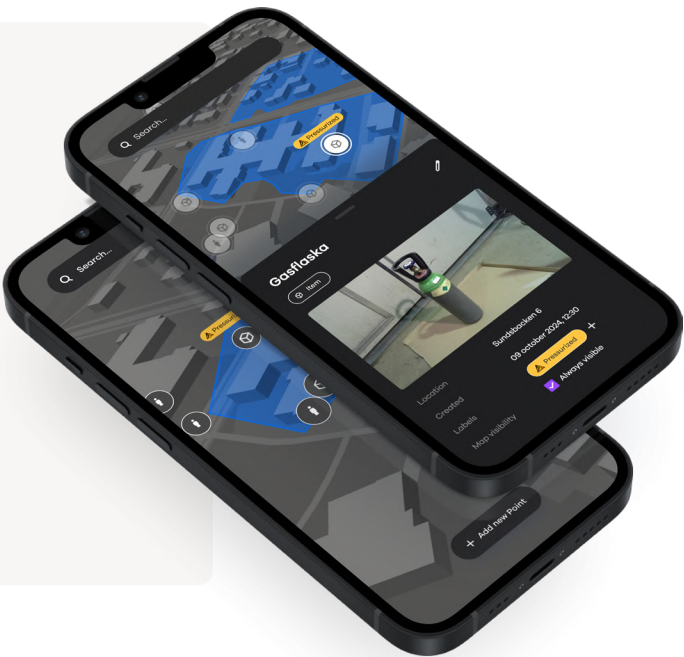

Asset Tracking

– Instantly locate equipment and machines

Stop wasting time searching for machines or tools. The Asset Tracking module gives you a live overview of the location of your assets—transforming non-value added time to production.

Benefits:

- Real-time location of vehicles, tools, and machinery – find what you’re looking for in a click
- Better utilization of resources
- Reduced delays and maintenance downtimes
- Safe storage of potentially hazardous equipment

Safe hot work

When employees, contractors, and various roles operate side by side, coordinating high-risk tasks and managing authorizations is critical for safety.

Mobilaris Site™, simplifies the coordination of hazardous work areas—such as welding or other hot work—by ensuring only authorized personnel, preventing risky scheduling overlaps and supporting storage of hazardous assets at a secure distance

SWEDISH WORK ENVIRONMENT AUTHORITY

Ensure compliance to stricter regulations

Stricter regulations require a more proactive approach to avoid fines and operational disruptions. Key compliance challenges include ensuring continuous monitoring, full traceability, and up-to-date risk assessments.

Mobilaris Site™ simplifies compliance with key regulatory areas.

Pressurized Equipment AFS 2023:11

Continuous monitoring and risk assessments of pressurized equipment, for example gas cylinders.

Underground Personnel AFS 2023:13

Employers need to keep track of personnel in underground environments to ensure safety.

Evacuation AFS 2023:13

Efficient evacuation procedures ensuring no one remains in hazardous areas.

Hot Work
coordination of high-risk tasks and authorization management is mandatory.

Energy Consumption
Mapping and reporting of energy consumption to comply to sustainability requirements.
